Summary

Recent BSc Information Technology graduate with First Class Honours with 4.0 GPA, who is focused on data science, analytics, software and web development. Passionate about innovative digital solutions and machine learning for real-world problems. With a solid academic background and hands-on project experience, Proven ability to document workflows, translate user requirements, and collaborate with cross-functional teams.

Education

Middlesex University BSc Information Technology First Class honours - Distinction	September 2022 - April 2025 Bachelors Degree
--	--

Experience

KFC YUM! Brands Operations Intern	September 2025 - Jan 2026 Dubai, UAE
- Verified and validated sales and transaction data using advanced Excel functions such as XLOOKUP and performed data integrity checks. - Created and analyzed Pivot Tables and worked with OLAP cubes for multidimensional reporting. - Worked with customer and employee satisfaction survey data in Qualtrics, performing correlation analysis and data validation. - Worked with multiple interactive dashboards in Power BI and maintained them to ensure accurate reporting and insights. - Conducted training data testing for Control Tower systems to ensure accuracy and reliability. - Performed extensive testing and quality assurance for KFC Listens survey platform to improve customer feedback processes.	

Shunya Ekai Technologies - Client: Medhub Global Computer Science Intern https://shunyaekai.tech	June 2025 - August 2025 Dubai Production City
Developed an Electric Vehicle Route Mapping System: using JavaScript, React, and Google Maps API to provide real-time navigation from the user's starting point to charging stations and final destination. The solution includes real-time charging station availability, location-based services, and a fully mapped user journey, enhancing convenience for EV users. Logistics Machine-Learning Model: Build and refine an ML model that: - classifies each product's allowable transport modes (air, sea, road); - explains exclusion criteria for non-viable modes; - predicts average port-to-port transit times and corresponding freight-cost ranges, enabling data-driven shipment planning.	

Intertec Systems IT Intern	June 2023 - August 2023 Dubai, UAE
- Created BPMN-aligned workflow diagrams and field validation documents to streamline operations. - Collaborated with stakeholders to gather and validate business requirements for insurance processes. - Supported process optimization by identifying automation opportunities and refining workflow steps based on business needs.	

Projects

Pet Health Diagnosis System Developed a Flask-based ML web app using Random Forest to predict pet diseases from symptoms, with user login, history tracking, and severity-based insights.
Used Car Price Analysis & Prediction Analysed US used car sales data, created PowerBI dashboards, and built a J48 model achieving 94.65% accuracy in predicting vehicle age categories.
Music Community Web Platform Built a full-stack music-sharing platform with login, media uploads, genre filters, and profiles; designed and refined community features through user feedback.

VISA

Received Golden Visa as an outstanding student.
